Office Deployment Tool

1. Remove all existing versions of Office before doing a new install
2. Create a directory (we use c:\officeinstaller)
3. Open officedeployment tool you were sent
4. Save to c:\officeinstaller
5. Open web browser to https://config.office.com/deploymentsettings and fill in what is needed
    1. Product: whats on the invoice
    2. Language: english/spanish
    3. Installation: click Office Content Delivery Network, show installation to user
    4. Click Export, Office Open XML formats
    5. Filename: configuration
    6. Click Download
6. Copy downloaded file to c:\officeinstaller
    1. Open file explorer to Downloads
    2. Right click on configuration.xml and select **copy**
    3. Go to Localdisk C: folder *officeinstaller*
    4. Right click and select **paste**
7. Open either cmd or powershell as administrator
    1. ```
       cd c:\officeinstaller
       ```
    2. ```
       setup /download configuration.xml
       ```

       Download will start, and take a long time (15-20 minutes)
    3. ```
       setup /configure configuration.xml
       ```

       This does the actual install.
8. At this point, a gui installer will start up.
