

Adding cc'd users as ticket CC on create

One of our clients wants everyone cc'd on an e-mail which creates a ticket to also become a cc on the ticket. I found the answer in <https://rt-wiki.bestpractical.com/wiki/EmailInterface> and <https://forum.bestpractical.com/t/adding-new-users-and-cc-users-to-tickets/19980/3>, and it is a simple (kinda') change to the configuration file, located in `installdir/etc/RT_SiteConfig.pm`. In my case, it is `/opt/rt5/etc/RT_SiteConfig.pm`. Add the following two lines:

```
Set($ParseNewMessageForTicketCcs, 1);  
Set($RTAddressRegex, insert regex here);
```

The `$RTAddressRegex` line is a regular expression which identifies the e-mail addresses used by your RT installation so they do not get included in the expansion (probably creating a loop). I worked for a while, coming up with the **perfect regex** for this, then realized that running the script:

```
/opt/rt5/etc/upgrade/generate-rtaddressregex
```

not only did it easier and faster, but fixed some things I had missed. Perfection is variable.

So, easy way:

```
echo 'Set($ParseNewMessageForTicketCcs, 1);' > /tmp/rtchange  
echo 'Set($RTAddressRegex, `/opt/rt5/etc/upgrade/generate-  
rtaddressregex`);' >> /tmp/rtchange  
cat /tmp/rtchange
```

review, then add to bottom of your `RT_SiteConfig.pm` file. Note, we do it this way since, `generate-rtaddressregex` can produce a warning if the correct parameter already set.
