

Monitoring Cyberpower UPS with Zabbix

This assumes you have a Cyberpower RMCARD305(205) installed. If so, you can set the SNMP on it, then monitor with Zabbix using the template at <https://www.zabbix.com/integrations/cyberpower>

I used the first one in the list, [https://github.com/zabbix/community-templates/blob/main/Power_\(UPS\)/Cyberpower/template_cyberpower_rmc card305\(205\)/6.0/README.m](https://github.com/zabbix/community-templates/blob/main/Power_(UPS)/Cyberpower/template_cyberpower_rmc card305(205)/6.0/README.md) d, which says that it is for snmp v2, but it works just fine for snmp v1.
