

Unix is a family of operating systems derived from AT&T Unix in the 1970's. As such, it is the oldest and most stable operating systems available. Many current operating systems are derived from Unix, the most well known being [Linux](#) and [Apple OS X](#).

[Daily Data](#) has been working with the Unix operating system since the 1990's, mainly [Debian](#) and various other Linux distributions, but also working with [AIX](#), [HP-UX](#) and [Solaris](#)

In this Knowledge Base, we cover the broad categories of

- [Free BSD](#)
- [Linux](#)
- [Apple OS-X](#)

[Microsoft Windows](#) is in a separate category since it is the only non-Unix platform we work on currently.
